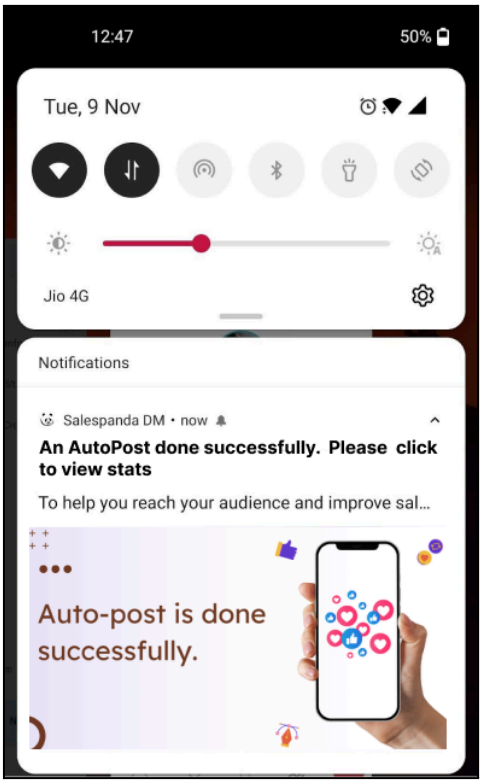
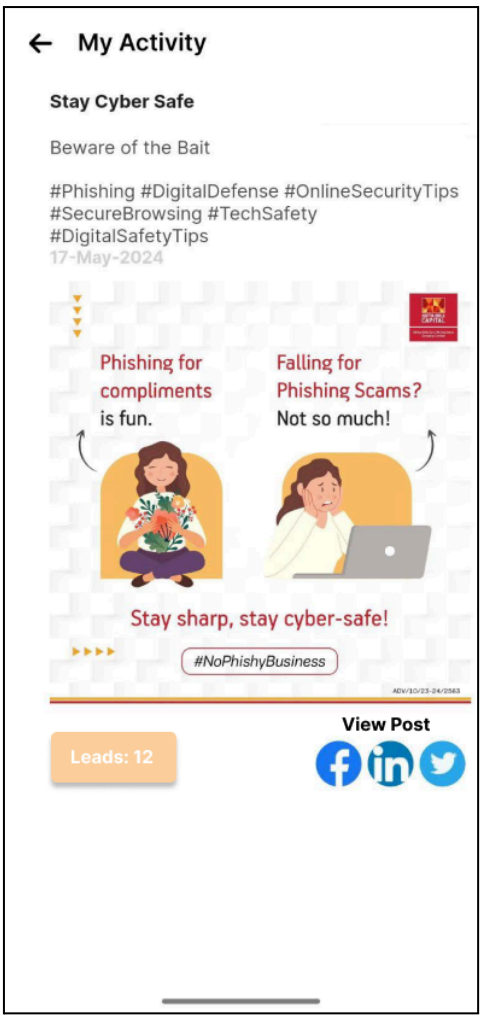
Requirement: The requirement is to create stats for autoposts.

Solutions: We must make the following changes once the auto post is done successfully.

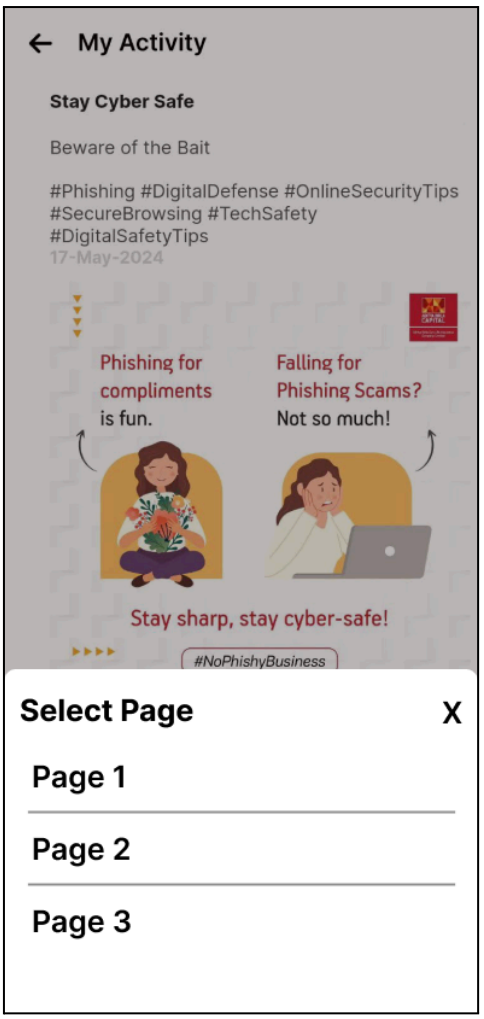
Notification: We will send the push notification 24 hours after the Auto-post is done.



Stats: The user clicks on the notification & they will be redirected to the following page where they will be able to see the Post stats. In this, the user will be able to see leads generated from this post & they will also be able to view their post on different social media channels.



If the user has more than one page on any social media handle then a popup will be visible with pages.



Once the user clicks on any page they will be redirected to that particular page on the social media handle.
